DETAILED ACTION

Claims 1, 6-37 and 43-46 are pending in this application.

Request for Continued Examination (RCE)

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 20, 2003 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 6-37 and 43-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tong et al. (US 6,515,022 B2).

Tong discloses the use of inhaled retinoids in the treatment of lung diseases. Column 2, lines 14-17 describes that retinoid therapy can be used for treatment and prevention of various lung diseases including emphysema also note claim 9. The retinoids of choice can include all of the "natural retinoids" such as all-trans retinoic acid,

Art Unit: 1616

13-cis and 9-cis retinoic acids (col. 4, lines 15-20). One aspect of the invention is a solution comprising a retinoid, a chlorofluorocarbon solvent and an alkylamine (col. 4, lines 7-11). The dosage amount of the retinoid is from 50 to 500 μg (col. 4, lines 25-28). Several dosage forms are characterized in the prior art such as metered dosage and dry powders inhaler (col. 4, lines 25-28 and 56-65). The prior art does not teach a method of treating different types of emphysema.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use of the composition and method of Tong for the treatment of the different types of emphysema. It is the position of the examiner that emphysema as used by Tong is used to describe the broad category of the disease and that panlobar emphysema, centrilobular emphysema, etc. fall under this broad category and are thus disclosed in Tong.

Applicant argues that 13-cis has a therapeutic profile substantially superior to that of ATRA (page 6, lines 14-17). Further, example 6 is cited to show this comparison of 13-cis with ATRA. One skilled in the art would expect the 13-cis isomer to have different pharmacokinetic profile than the racemic mixture (page 10, lines 25-34) and therefore different results. The finding that 13-cis is more favorable compared to ATRA is not unexpected. Further, Tong et al. specifically teaches using 13-cis retinoic acids.

Conclusion

3. Claims 1, 6-37 and 43-46 stand rejected.
